EXPERIENCE

Software Engineer Intern

Poly Ilc

November 2021 - Present

- Developing a full stack web and mobile application with Vue/Ionic, Python and postgreSQL.
- Developing front-end features that allow users to input a multitude of data points.
- Working within an agile framework with a Jira board and github.
- Setup docker container to ensure continuity between developers.

Software Engineer Intern

Treehouse Strategy

June 2021 – October 2021

- Developed a full stack application with Javascript/React Node and MongoDB.
- Built out a MongoDB schema to store user data and documents that correspond to user uploaded files in an AWS S3 bucket.
- Built out most of the backend logic and developed a front end that integrates with the backend/database and allows users to login/register, upload, edit and delete documents securely with JWT Authentication.
- Developed the frontend in pure Javascript then transferred it to React so we could take advantage of libraries and the ability to divide the application into components that can be used to develop a React Native phone application.

Rater

Lionbridge - Remote

March 2018 – Present

- Rate content of Websites and search results based on a variety of criteria. SEO/search query matching, content moderation and more.

Independent Contractor

Appen, Inc

Sept. 2019 – June 2021

- Multiple contract roles assessing user experience of websites and search engines.

Owner

Aqua Envy LLC

Aug. 2018 – Aug. 2020

- Build and serviced ponds in the chicagoland area.
- Built an SEO optimized website with easy navigation.
- Set up a Google ad campaign to attract potential customers.

Pond builder, digital marketing

Aqua Landscapes Inc

March 2017 – Aug. 2018

SKILLS

- HTML, CSS, Javascript
- React framework including React Native
- Node.JS, Express
- SQL, MongoDB
- Data Structures and Algorithms
